

ANNOUNCING THE THIRD PILLAR

As was demonstrated in the first pillar, the presence of observers has been totally ignored when facing an autonomous, dynamic and synchronized Universe through an ‘absolute Time’, independent of the observer.

In the beginning of the XX century (1905), with the publication of the Relativity Theory by A. Einstein, Physics was supported by one more pillar, that is because not only it brought back the observer in to the scene, it formulated and proved the existence of a physical ‘Space-time’, which curves when in proximity of large gravitational masses. ‘Time’ then became ‘relative’, as it depends on the ‘viewpoint’ of the observer. That is, It could no longer be measured in the same way everywhere.

Now, 100 years later (2005) after the Relativity Theory, the ‘Spatial Theory’ (ST) is being published, which is based upon other ‘universal concepts’ postulated on Volume II of this work.

In this introductory compendium we announce only our ‘intention’ to introduce to the scientific society a new theory, which has in its bulk, proposals for the **3rd pillar** of general Physics.

The new pillar we propose, will represent the ‘Intelligent Principle’, which is the basis of the ‘convenient Laws’ which rule over the ‘actions’ and ‘reactions’ propagating through ‘convergent forces’, such as individual or collective ‘intentionality’. Through these ‘laws’ and ‘principles’, we can better comprehend the “Intelligent Transmission of Matter”, which is still controversial by ‘quantum Physics’.

The **Spatial Theory** intends, among other proposals, to “elect” Man as the protagonist of ‘Time’, as he alone can exist within his ‘mental Space’, as is postulated on volumes I and II of the CST; ‘Time’ does not depend only on the observer’s position, but also on his existence;

It is the same as saying:

- ‘Time’ is relative to every observer, and each one has their own ‘Time’.

In ‘mental Space’, the observer is able to shorten or lengthen ‘Time’, and so, he can transform the Universe through the ‘imaginary which transits towards the ‘real Space’ and vice versa. All it takes is a sincere and deserving wish... So, Man thinks and acts in accordance to a ‘Convenience’, be it constructive or destructive.

If everything that exists is the result of an “intention”, conscious or unconscious, individual or collective, motivated by an implicit or explicit “intelligence” put into action, so:

- Everything is convenient!

SUMMARY:

Initially, the first ‘universal concept’ was introduced:

The ‘Dynamic Universe’ and its Laws, represented as the **first pillar => (D)**

Next, the introduction of a second ‘universal concept’:

The ‘General Relativity’ and its postulates, represented as the **second pillar => (R)**

Now, a new proposal for the third ‘universal concept’:

The ‘Intelligent Universe’ and its laws, represented as the **third pillar => (I)**

PS: The ‘Universal Intelligence’ is the basis of the ‘Laws of Convenience’

“It will not be possible to fully explain the elementary laws of the Universe without taking into account the ‘Intelligent Principle’.”
